VISION

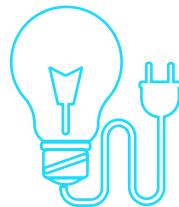

To bring everything to life with electroluminescent technology.

MISSION

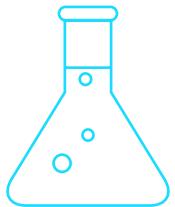

To let our customers make a unique impression by applying LumiLor to whatever they want to. LumiLor is a creative solution as it understands the customer's businesses, powered by a premium technology and unleashing its massive potential in an astonishing fashion.

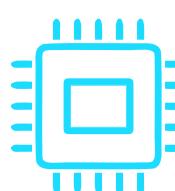

COMPANY HIGHLIGHTS

Innovative LEC technology with the potential to transform the lighting industry

Partnerships with global chemicals developers and distributors; Rust-Oleum and Merck

Highly efficient custom electronics for every small and big application successfully developed by Detailing Devils.

Significant traction to date including projects and JDAs with international manufacturers such as Airbus and two of the global top ten automotive firms

\$50bn
Estimated total addressable market

Patent protection in 52 countries

Defensible position as LEC industry leader

Scalable business model

The only LEC company globally with a viable development path to mass-application

Premium brand, product and service

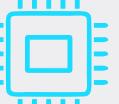

Screen Printing technology and material developed by Detailing Devils Pte Ltd. enabling mass application of LumiLor electroluminescent paint.

HISTORY & BACKGROUND

2009	2010	2011	JUL 2013	SEP 2013	JAN 2014	JAN 2015	JUN 2015	SEP 2015	OCT 2015	NOV 2015
------	------	------	----------	----------	----------	----------	----------	----------	----------	----------

										
The idea is formed	LumiLor prototype is created	Andy Zsinko and Shawn Mastrian co-found Darkside Scientific LumiLor version 1 is created Friends and family start investing	First US patent awarded Initiation of \$3m Angel Investor round	Creation of production facility in Ohio	JDA signed with Automotive OEM X	Uvex Helmets complete prototype	JDA with Rust-Oleum signed	Customer training for Aftermarket product begins	Brompton Bikes commissions 1st LumiLor-lit bike	GM use a LumiLor-lit car for trade show

MAR 2019	DEC 2018	MAY 2018	OCT 2017	APR 2017	MAR 2017	FEB 2017	JAN 2017	JUN 2016	APR 2016
A new Company: "LumiLor Holdings Pte Ltd" registered in Singapore for handling worldwide operations.	Successful prototype passed by OEMs like Hero, TVS, Titan Saint Gobain for using LumiLor on their products	Detailing Devils Pte. Ltd. successfully developed screen printing technology enabling mass application for LumiLor	Custom Electronics Developed by Detailing Devils Pte Ltd. for small applications	Darkside and Merck form partnership	Second US patent awarded Swiss-based international distributor Andre Koch agrees to sell LumiLor	Airbus use LumiLor on aircraft	Detailing Devils Pte Ltd. and Darkside Scientific enter into R&D collaboration to further expand the reach of the technology.	Professional paint distributors begin selling LumiLor	Online shop opened and DIY training videos released

WHAT IS LUMILOR?

LUMILOR IS A LIGHT-EMITTING COATING ("LEC").

It is a revolutionary paint-like coating system that can be applied to almost any 3D object. When an electrical current is passed through the coating, it will emit light. This means LumiLor can be programmed to turn on and off as desired.

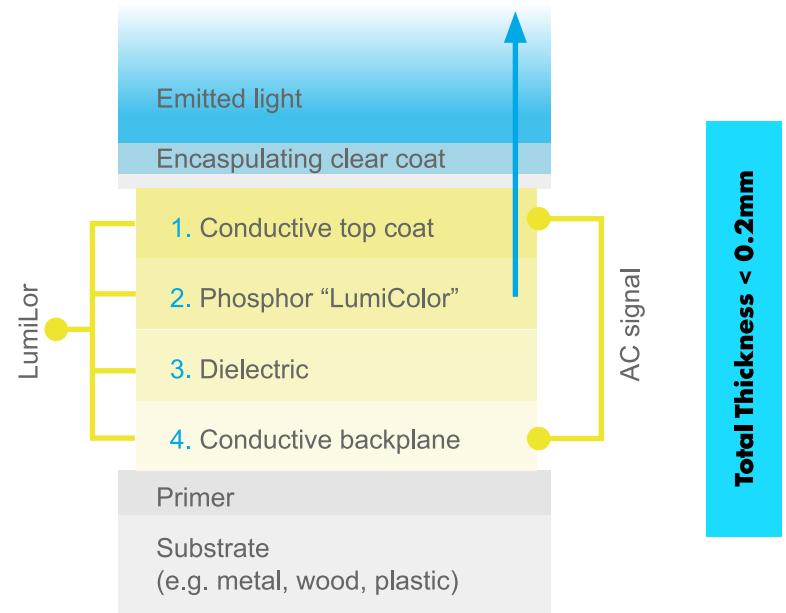

LUMILOR CAN COVER ALMOST ANY OBJECT IN LIGHT.

POWER SOURCE

Electroluminescent LECs and panels have to be driven by an "inverter" that delivers an alternating current between 50Vac and 400V ac and a frequency of between 50Hz and 2,500Hz.

THE FOUR LAYERS OF LUMILOR LEC:

- **Conductive Top Coat** - Optically transparent layer which acts as a highly conductive top coat.
- **Phosphor "LumiColor"** - The critical layer that determines life, brightness, and emitted color.
- **Dielectric** - Assists the phosphor in the emission of light, augmenting the brightness and uniformity.
- **Conductive Backplane** - Near-zero resistance film that provides the bottom conductor.

The four LumiLor layers when applied are less than <0.2mm (0.003") thick and are encapsulated by a clear coat for electrical insulation.

PRODUCT FEATURES

LIMITATIONS

While LumiLor has many benefits and is currently suitable for many uses, it is still in the relatively early stages of development and has some limitations to its use in its current form. By raising investment, Detailing Devils Pte Ltd. can ramp up its R&D efforts and is confident of being able to improve the performance in areas like light output, visibility, cross, mass application.

APPLICATION PROCESS

ENCAPSULATING AUTOMOTIVE CLEAR COAT

In the last step, the Conductive Top Coat is topped off with Encapsulating Automotive Clear Coat.

CONDUCTIVE TOP COAT

The conductive Top Coat layer is the final conductive element- the most charged allows Lumilor to emit light.

BUS BAR

Bus Bar Application: The next application is the Bus Bar. The Bus Bar is the conductive layer of the Back Plane Material that provides a zero resistance power for better current distribution to the conductive top coat.

BACK PLANE MATERIAL

Back Plane Layer: The Back Plane is a highly conductive low-resistance material that allows the current to be supported across the entire electric surface when applied in an even and consistent manner.

DIELECTRIC

Dielectric Layer: Next is the Dielectric layer that does two very important things. First, it access insulation supplied over the entire back plane evenly ensuring there is no burning or shorting. Second, it ensures the current is being distributed evenly across the surface to produce even light.

BASIC EXPLANATION OF THE LUMILOR

LUMICOLOR

Lumicolor Layer: The color providing is the function of our third coat called the 'LUMICOLOR'. Lumicolor is a very large part that will be sprayed on with black lights to see where the color is being applied.

WORLD'S FIRST **LIGHT EMITTING COATING**

FOUR UNIQUE LAYER COATING SYSTEM

BACKPLANE | **DIELECTRIC** | **LUMICOLOR** | **CONDUCTIVE CLEAR**

LumiLor is available in **Eight native colors**, these are colors you see when LumiLor is lit.

MARKET

TRANSPORT

AUTOMOTIVE

- Automotive Industry: Global Car Accessories Market will reach USD 522.01 Billion by 2022 with a CAGR of 6.4%: Zion Market Research. Most of the market is driven by increasing inclination towards vehicle customization. LumiLor is the new and coolest way to customize your vehicles.
- Manufacturers are focusing on implementation of new technologies to light up various items inside and outside of the vehicle using electroluminescent lighting ultimately driving the growth for this market.
- Automotive supply chain is moving from Just-in-Time to Just-In-Sequence model of supply chain to provide more design and personalization options to the end customer.

MARKET TRANSPORT

AVIATION & SHIPPING

- A great advantage of Lumilor is the enhanced visibility factor.
- Unlike many light sources such as LEDs, the brightness of Lumilor is distributed across the whole surface of the coating and appears the same from all angles of view. Lumilor produces a single-color light that is visible from a large distance and through many types of atmospheric conditions such as fog, snow, and smoke.
- This feature can be very useful from a safety point of view for these industries. We have done a successful project with the biggest aircraft manufacturer: Airbus. The details of project.

Lumplor®

MARKET

ADVERTISING

- Advertising industry finds a multiple applications for electroluminescent lighting in sign boards, banners, posters, billboards, POP signs in stores, trade show booths, special offer signs, podium in front of booth area etc.
- On an average, companies in most successful industries spend more than 10% of their budget in branding, advertising and marketing. LumiLor creates a new space in this market.
- Consumer retail brands spend anywhere between 1000\$ - 3000\$ on every retail store for branding purposes. LumiLor is the new way of creating a unique brand image.

MEDICAL EQUIPMENT

- Many medical equipment and machines require uniform lighting field for measurement and testing purposes which cannot be achieved by LEDs. LumiLor is a completely uniform light source and some medical equipment manufacturers who make eye testing machines have already contacted us for the same.

Lumitor®

MARKET

GIFTING

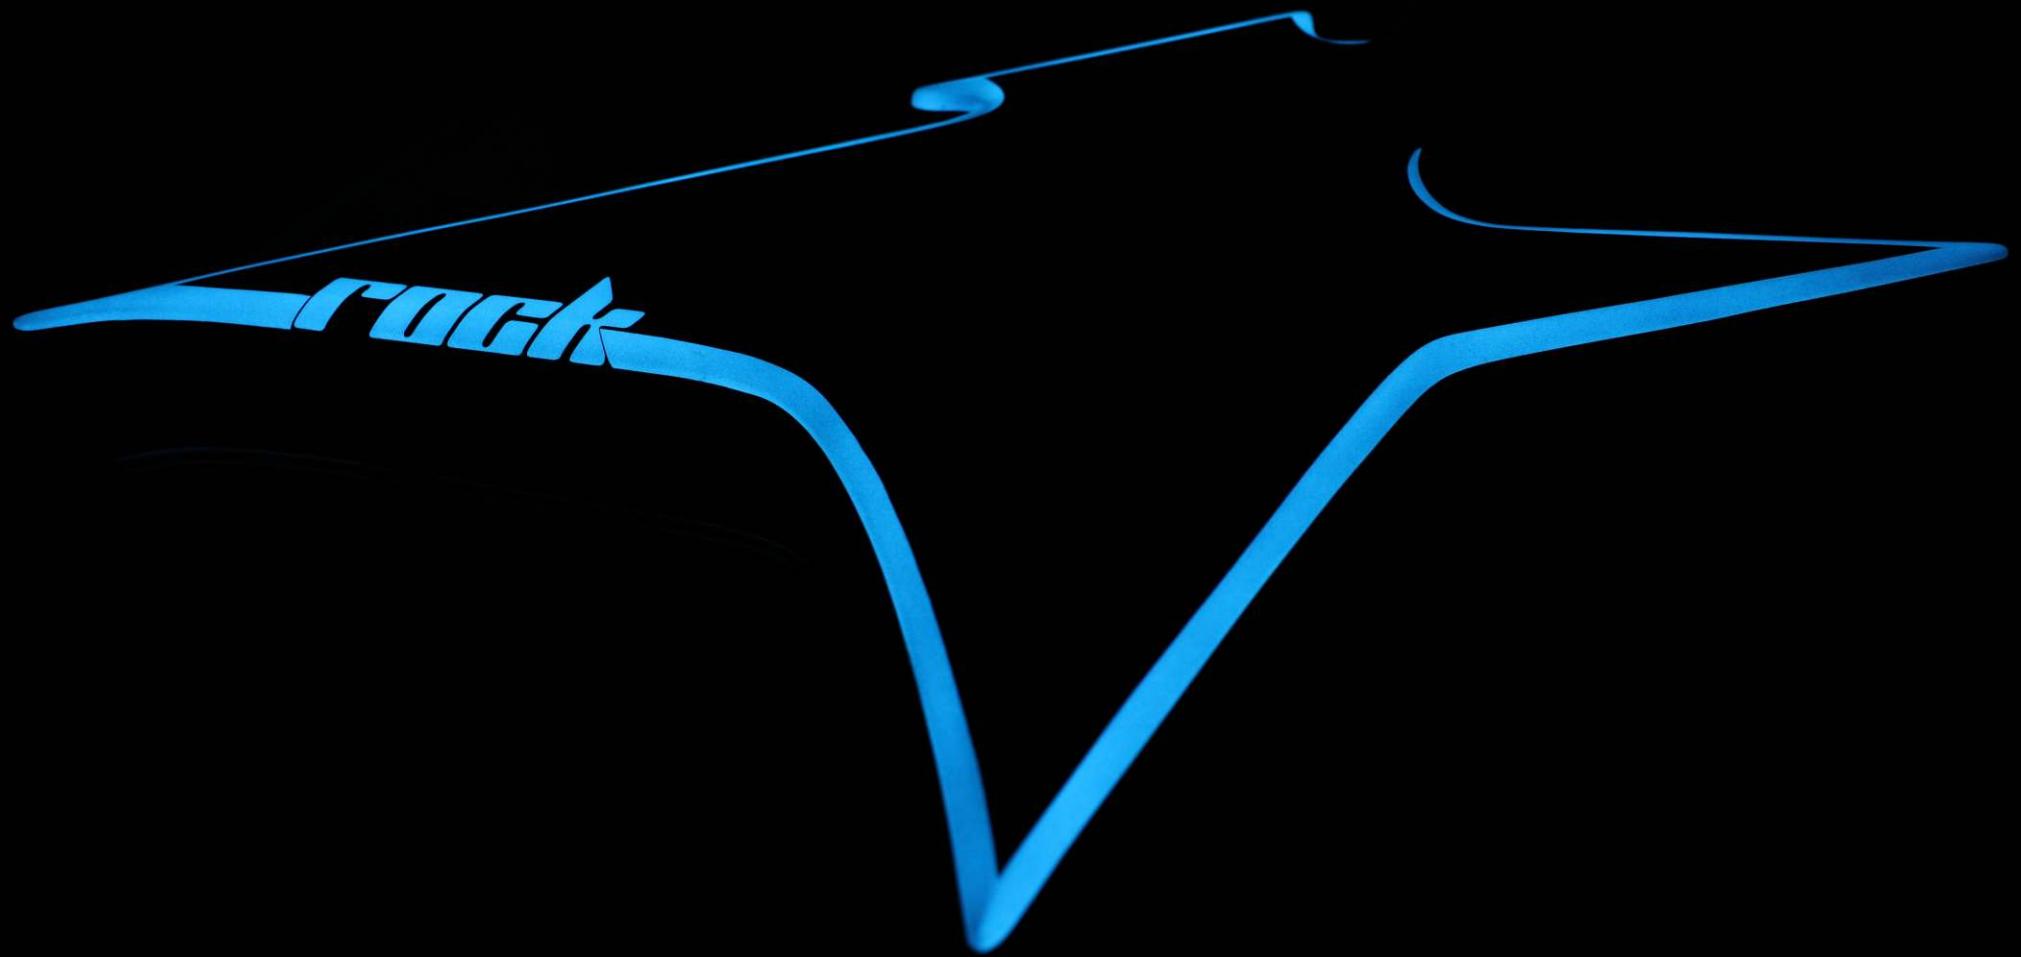

- The gifting market's size is estimated at USD 40-42 billion, with many players reporting annual growth in the range of 20-40%.
- It comprises corporate gifting and personal gifting, with the former making up a significant share.
- Higher number of occasions are being added to the tally. Father's day, Mother's day, Valentine's Day and the list is expanding.
- The consumers of today want a touch of style, uniqueness, and personalization in their gift items, in order to match their status.
- LumiLor has the potential to start new gifting trends and drive the market

Source: <http://www.technopak.com/Files/gifting-trends-market-in-india.pdf>

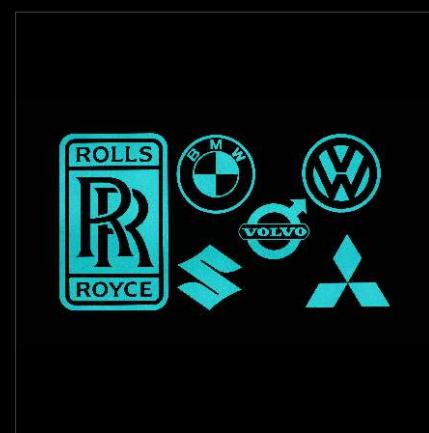

FASHION

- Includes outerwear, men's women's and children's clothing, toys, footwear, clothing accessories and sports gears etc. has seen a use of electroluminescent lighting.
- Fashion market generates more than \$250 billion annually and anticipated to drive electroluminescent lighting market.
- LumiLor gives the fashion industry a new way to show-off!

Lumilor®

MARKET

CUSTOMIZATION

- More than 50% of the customers have shown interest in customized products and services. – Deloitte
- Personalized products help brands to increase conversion levels and increase brand loyalty.
- The industries are slowly moving from mass production to mass personalization of their products. Integrating the supply chain of their products in the same manner.
- Our ability to design/style any product according to customers demand makes LumiLor a part of every product manufacturing industry in the world.

(Source:<https://www2.deloitte.com/content/dam/Deloitte/ch/Documents/consumer-business/ch-en-consumer-business-made-to-order-consumer-review.pdf>

LUMILOR CAN BE A PART OF ANY PRODUCT MANUFACTURING INDUSTRY WILLING TO MAKE CUSTOMISED DESIGN SOLUTIONS FOR THEIR CUSTOMERS.

MOVE OVER LEDs

- Detailing Devils Pte Ltd believes LECs will replace many uses of LEDs, particularly where aesthetics play an important role in the product. LEDs are extremely bright points of focused light, whereas LumiLor allows an even, consistent, and tunable light emission over the surface of the coating and can be applied as precise logos or patterns.
- For example, in the Consumer market, LEDs currently serve as a means to alert the end-user that the appliance is either "on" or in "standby" mode and are widely used in most electrical appliances such as kettles, irons, toasters, sound systems, televisions, and computers etc.
- LumiLor gives the manufacturer the opportunity to brand their product, by having their logo subtly light up when the appliance is turned on. This is even more impressive when the "hidden reveal" technique is used -when switched off nothing can be seen, but when switched on the company logo gently shines through the top coat.

APPLICATION TRAINING MODULES
